

ALL RIVER EQUIPMENT

Eco-Safe Toilet System comes with roto molded tank, 20mm ammo can, and seat assembly. **If you will not be using a SCAT machine to clean, please specify that you will need the 3" cleanout hose and the wash out hose adapter.**

Consider using powder dish washer detergent, a holding tank chemical, or "Cleanwaste" Poo Repair Deodorizer to control odor.

The tank holds 5.5 gallons, and the manufacturer estimates 50 uses without urination into the tank. To conserve capacity, consider urination into the river. Toilet seats can be carried separately or stored inside another 20mm ammo can. Please let us know if you need an additional 20mm ammo can to store your toilet seat. Consider creating your own system for about the same price as a rent. Montana FWP has a YouTube video for the approved systems and at the 4:28 mark, the video describes the bucket system.

To prevent odors and insects, avoid urination on land. Please urinate only on wet sand or directly into the river. Urinating on hot, dry sand or rocks creates an offensive odor and attracts insects. If your group uses a pee bucket, please dump it into the main current of the river.

Please do not put wet wipes, plastic bags, peat pots, cans, diapers, ashes, straw, cat litter or other debris in your toilet if you plan on using the SCAT machine. The SCAT Machine is for use with toilets not utilizing plastic bags or peat pot liners and can clog or get damaged if foreign objects are put through the cycle.
